

The e.rack slimline is designed for industrial and experimental test systems requiring precise high speed measurement of electrical, thermal, and mechanical quantities in engine and component test beds.

The e.rack slimline is a low profile rack mount design, and easily connects to the wide variety of field devices used in today's test beds. Sample rates up to 1000 Hz and resolutions up to 19 bit are possible depending on the unit and signal type used. Standardized communication protocols (Profibus-DP and Modbus-RTU) allow the e.rack slimline family to work with a wide variety of application hardware and software (including e.bloxx).

All of this measurement power is housed in a 1 unit (1U) 19" rack for unparalleled density. With the addition of an e.series controller (e.gate, e.pac, etc.) even the most sophisticated applications can be achieved with ease.

### 16 input channels
