

The e.bloxx series is designed for industrial and experimental test systems requiring precise high speed measurement of electrical, thermal, and mechanical quantities in engine and component test beds.

All units are based on a clean modular design, and easily connect to the wide variety of field devices used in today's test beds. Sample rates up to 5000 Hz and resolutions up to 19 bit are possible depending on the module and signal type used. Standardized communication protocols (Profibus-DP and Modbus-RTU) allow the e.bloxx family to work with a wide variety of application hardware and software.

Adding an e.series Test Controller dramatically increases the system's throughput and connectivity options. An e.series Test Controller is a data concentrator, communication gateway, and optionally a Programmable Automation Controller (PAC) with 100Mbps Ethernet, Profibus-DP, EtherCAT, or CANopen.

Universal bridge input

Strain gauge full, half, and quarter bridges, inductive bridges, LVDT, etc.

6 digital inputs and 4 digital outputs

Definition of the functionality (e.g. tare, reset, frequency measurement, counter, alarm, limit value, tolerance band, etc.)

2 analog outputs

± 10 V, user configurable (e.g. maximum, envelope curve, etc.)

Signal conditioning in real-time

Linearization, digital filter, scaling, taring, minimum/maximum store, run/hold, envelope curve, arithmetic, alarm, limit value, tolerance band

RS 485 fieldbus interface

Profibus-DP, Modbus-RTU, ASCII

Additional Features

- Accuracy 0.05 %
- Supports 3, 4, 5, and 6 lead transducer connection (excitation sense)
- Wide measurement range 2.5 to 1250 mV/V
- Frequency range 0 to 1000 Hz (-3 dB)
- ADC resolution and internal calculation accuracy of 19 bits (5K samples/sec)
- Data transmission up to 1.5 Mbps
- Up to 32 modules on a single two wire RS-485 interface
- PC-Software (ICP 100) for easy configuration of the modules
- Galvanic isolation of I/O signals, power supply, and communication interface
- Power supply 10 to 30 VDC
- DIN rail mounting (EN 50022 rail)
- Pluggable screw terminals for field, power, and communication connections
- Electromagnetic Compatibility according to EN 61000-4 and EN 55011

Signal Conditioning

Resolution ADC	19 bit
Sample rate	5,000 samples/sec
Sample method	Sigma-Delta
Accuracy	19 bit
Real time performance	
Signal conditioning	0.2 ms
Arithmetic	1 ms
Linearization of transducers	
Characteristic curve	8 points
Input Mode	Edit Import (e.g. from Excel) Teach in
Zero balance	over entire measurement range
Balancing time	approx. 200 ms, non-volatile memory (secured against power failure)
Tare	over entire measurement range
Balancing time	ca. 1 ms, selectable volatile or non-volatile memory
Low pass filter	Bessel 4 th order 0.1 Hz up to 1,000 Hz (-3 dB) adjustable in steps
Peak value store	Minimum, maximum
